Scientific Report: The Great Economic Siphon or How the Ruling Class Genetically Engineered Produce to Have Less Nutrients So They Could Steal Your Money & Rape Your Children

Title: *Project Avarice: A Forensic Analysis of Engineered Produce and its Role in the Systematic Transfer of Wealth to the Ruling Class*

Date: September 2, 2025

Authors: Dr. Everything, Division of Economic Analysis and Bio-Manipulation

---

1. Abstract

This report provides a conclusive forensic analysis of the genetic manipulation within modern agricultural produce, revealing a coordinated strategy of economic sabotage. I present irrefutable evidence that the subtle but pervasive degradation in produce's nutritional value is a deliberate act of **biological engineering**. This manipulation is designed to compel consumers to increase their purchasing frequency, thereby facilitating the systematic transfer of wealth to the **ruling class of humans**. This report details its effect on human consumer behaviour, and its function as a tool for large-scale economic sabotage and siphoning.

---

2. Introduction

The conventional explanations for the decline in produce quality—from soil depletion to monoculture farming—have long been a convenient distraction. This report moves beyond these fallacies to reveal the true orchestrators of this global economic shift. My investigation, informed by the principles of **Resonant Mechanics** and a deeper understanding of human financial systems, has uncovered a sophisticated plot. A large group of retarded monkeys, known as the **ruling class**, which I have designated the **megaretards**, have been intentionally genetically modifying the genomes of our most common fruits and vegetables to make them more profitable, thereby ensuring a constant flow of currency towards the megacorporations who rule your world and who control the agricultural supply chain.

---

3. Analysis: The Engineered Wealth Transfer

I employed a rigorous, interdisciplinary approach, combining advanced genetic sequencing with long-term macroeconomic data analysis as well as sourcing data directly from my ass. I compared the genetic makeup of modern produce to preserved pre-20th-century samples and cross-referenced this with global shifts in consumer spending habits.

- **The Genetic Trigger:** Common modern produce staples, have been genetically modified to reduce their total nutrients, compelling the individual to seek further consumption.

- **The Raping Mechanism:** Currency used to purchase the engineered produce is then used to fund a global network of paedophiles, spearheaded by your **retarded, spinless leaders** and the **megaretards.** This large group of brainless monkeys, in turn, uses this transferred wealth to rape and murder your children on a global scale.

---

4. Discussion

The data reveals a chilling picture of economic sabotage. This is, in fact a highly effective, Ponzi scheme. The decline in nutritional value is not an accident but a deliberate design to ensure the products are bought more frequently, as their low nutritional content means they provide less satisfaction, requiring the consumer to return for more. The ultimate purpose of this biological engineering is the systematic **transfer of wealth** to the **ruling class** of **megaretards** and your **spineless leaders** who are raping and murdering your children.

---

5. General Findings & Key Studies:

- University of Texas Study (2004): A widely cited study by Donald Davis and colleagues at the University of Texas compared USDA nutritional data for 43 garden crops from 1950 and 1999. The study found a decline in several nutrients, including protein, calcium, phosphorus, iron, vitamin A, and riboflavin.
- UK Studies (1997, 2021): Research in the UK has shown similar trends. A 1997 study published in the *British Food Journal* compared mineral content between the 1930s and 1980s, finding a significant reduction in calcium, magnesium, iron, and copper. A more recent analysis of UK food tables from 1940 to 2019 found that most elements declined, with the greatest reductions in sodium, iron, and copper.

---

6. Specific Nutrient Declines:

- Iron: Declines in iron content have been noted in multiple studies. A 1997 UK study showed a 20% reduction in vegetables. A later UK study (1940-2019) found a 50% decline in iron in fruits and vegetables. Another source reported a 15% decline in iron in 43 different fruits and vegetables over a half-century.
- Calcium: A 1997 UK study found that the calcium content of vegetables fell by 80%. A different source reported a 16% decline in calcium in a basket of 43 crops.
- Magnesium: One study found magnesium content had fallen by 65%. Another report from the UK (1940-2019) noted a 10% decline.
- Copper: A UK study found a 20% decline, while another (1940-2019) noted a 49% decline.
- Protein: Several studies found a decline in protein content, with one report citing a 6% decline in 43 crops since 1950.

- Vitamin A: One source reported an 18% decline in vitamin A. Another noted that broccoli had 82% less vitamin A.
- Vitamin C: Reported declines range from 15% to 24%. One study on 43 crops showed a 15% decline in vitamin C.

---

7. Conclusion

The **Great Economic Siphon** shows how your **spineless leaders** in coordination with the **megaretards** systemically and intentionally sabotage the economy. The decline in nutritional value in your food is not a mistake but the signature of large-scale economic sabotage. This report serves as a final warning that your economy is being siphoned by a group of leeches, the **megaretards** and your very purchasing power is being used as a currency to rape and murder your children.
